

SCMPLE

Save Your Project

Presented by Tejus Parikh

The Problem

- Lots of useful software can be built in 10's of hours
- Configuring a project environment takes at least 4 hours (if nothing goes wrong)
- That's 10% of a 40 hour project wasted
- $10\% \times \$5000 = \500
- Recurring costs

Our Solution

- Hosted and managed service. Provision a new project environment in 15 minutes
- Source control (git), issues, prioritization, discussions
- The most needed features working together
- Using the service takes almost no time

Vitals

- Self-funded
- Plans for prepackaged local version
- Q1 free private beta
- Q2 open pay-as-you-go pricing
- Get on the beta invite list. Sign up on www.scmp.com
